

```
1 from django.contrib import admin
2
3 # Register your models here.
4 # Listing is the class name of the models.py
5 from .models import Listing
6 # create a class for the table by passing tuple
7 # list_display is how data display
8 # list_display_links create a link selection
9 # filter is the filter box at the right
10 # list_editable for check selection, a save button will generated
11 # search_fields = create a search box at the top
12 # list_per_page ; otherwise, the list can keep going without pagination
13
14
